## 1. Introduction

Hi, in this little guide I 'll show you a way how you can dissable the body morphing for the female heroine. So when your heroine becomes strong, she doesn 't appear beefed up. If she gets more accurate, she doesn 't appear tall. And if she eats much, she doesn 't appear fat.

Please take in mind the those changes are for appearances only. The gameworld and all its npc 's will still think that you 're beefed up, tall and/or fat. So this will also cause some glitches, though not gamebreaking ones for as far as I 've tested the game with it yet.

For example when your heroine is a tall girl and she wants to kiss her husband, who would probably be one head length smaller than she. He will still think you 're a big girl, so it shall appear that he is looking in the air while your heroine is sucking his throat instead of kissing him.

So use it at own risk.

The tool I 'll use here is Timeslip 's BnkBrowser and -Creator. The way I 'll use it might be a bit of a detour, but until now it 's still the way I feel most comfortable with.

You can download Timeslip 's BnkBrowser and BnkCreator at following url:

<http://fable3mod.com/forums/index.php?t=msg&th=71&start=0&S=ffc9bb93970a9b645dea14377ff60035>

## 2. Extracting .BNK Archives

First of all, to make things clearer for my guide, I 'm going to make a new folder named "WorkBench". There I will do my modding after I 've extracted the .BNK archives to it.

### 2.2. Levels.bnk

Start the BnkBrowser and open "levels.bnk".  
(C:\Program Files (x86)\Microsoft Games\Fable III\data)

Extract all to a new folder named "levels" and place that folder in "WorkBench".

## 2.2. Skeletalmorphs.bnk

Search for "skeletalmorphs.bnk" and "skeletalmorphs.bnk.dat" and copy those to the same directory (to the desktop or the C:\ root for example).

You can find "skeletalmorphs.bnk" in "levels" (...\\WorkBench\levels).

You can find "skeletalmorphs.bnk.dat" in Fable III 's datafolder.

(C:\Program Files (x86)\Microsoft Games\Fable III\data)

Start the BnkBrowser and open "skeletalmorphs.bnk".

Extract all to a new folder named 'skeletalmorphs' and place that folder in "WorkBench".

## 3. Modding skeletalmorphs

Before we start modding, I recommend that you create a backup copy of following original files:  
levels.bnk, levels.bnk.dat, skeletalmorphs.bnk, skeletalmorphs.bnk.dat  
(or at least a backup of the original skeletalmorphs.bnk and skeletalmorphs.bnk.dat)

That way you don 't have to reïnstall the whole game if you want to reverse the game back to its original state.

Open the map "heros" in "skeletalmorphs" (...\\WorkBench\skeletalmorphs\art\characters\heros).  
You 'll notice two maps there: "unclothed female" and "unclothed male".

Now delete "unclothed female" with all its contents.

You can always try to delete the "unclothed male" and see what happens. It will probably does the same changes, but then for the male hero. But I 've never tried it myself because I always choose the female heroine at the start of the game. So I won 't encourage you.

Well anyhow, that 's all there is to modify so lets get to repacking the BNK 's.

## 4. Repacking .BNK Archives

### 4.1. Skeletalmorphs.bnk

Start the BnkCreator, add the modified 'skeletalmorphs'  
and create the new "skeletalmorphs.bnk".

Grab the fresh created "skeletalmorphs.bnk" and move it to "levels". Allow the overwrite.

### 4.2. Levels.bnk

Start the BnkCreator, add the modified "levels" and create the new "levels.bnk".

### 4.3. Final touch

Grab the fresh created "levels.bnk", "levels.bnk.dat" and "skeletalmorphs.bnk.dat" and move those to their assigned destinations. Allow the overwrites.

After you 've done these changes, your heroine 's body will stay as small and skinny as from the start of the game. Though the animations and hero stats will stay in their original state.

So far goes this mod, hope you enjoy it.

PS:

Check out my other guide in which I 'll explain how you can get rid of the skin morphing like becoming pale and getting bodypaint over your whole face, or become ugly and greyskinned depending on the good or evil deeds you perform.

Hi, in this little guide I 'll show you a way how you can dissable the skin morphing. So you don 't see any weird facepaint after doing a lot of good deeds, or you won 't be ugly and grey after doing a lot of bad deeds. In the end it 's up to you what you 'd like to dissable.

You can find "morphs\_textures.bnk" in "levels"  
(...\WorkBench\levels\art\characters\heros\morphs).

You can find "morphs\_textures.bnk.dat" in Fable III 's datafolder.

(C:\Program Files (x86)\Microsoft Games\Fable III\data\art\characters\heros\morphs)

Start the BnkBrowser and open "morphs\_textures.bnk".

Extract all to a new folder named 'morphs\_textures" and place that folder in "WorkBench".

## 3. Modding morph\_textures

When you open the map with the hero 's diffuse maps, you 'll see a lot of .tex files for the hero 's face, torso and legs. (...WorkBench\morphs\_textures\art\characters\heros\morphs\diffuse)

At the next page you can see how the .tex files in each folder are sorted.

"blend\_morality3\_primal0.tex" is the standard texture in each folder used for your hero when you start a new game. You have to overwrite all the other .tex with this one (by copy&rename the standard .tex) so you can fool game by providing it with the same texture, each time you morph ingame.

This might take some of your time, but it is a waterproof solution.

You 'll also notice extra .tex files.  
(evil\_01.tex, evil\_02.tex, good\_01.tex, good\_02.tex, neutral\_01.tex and neutral\_02.tex.)  
Best that you overwrite those too.

Asside from the diffuse textures you might also find some interesting files in the normal map.  
(...\WorkBench\morphs\_textures\art\characters\heros\morphs\n ormal)

strength0.tex (standard)  
strength1.tex  
strength2.tex  
strength3.tex  
strength4.tex

Those normals define how detailed the muscles of your hero are. So for example, if you don't want your female heroine to have a sixpack after getting stronger, best to overwrite all the normals with the standard one (strength0.tex).

#### 4. Repacking .BNK Archives

Before we start repacking, I recommend that you create a backup copy of following original files: levels.bnk, levels.bnk.dat, morphs\_textures.bnk, morphs\_textures.bnk.dat (or at least the original .tex files)

That way you don't have to reinstall the whole game if you want to reverse the game back to its original state.

##### 4.1. Morphs\_textures.bnk

Start the BnkCreator, add the modified 'morphs\_textures' and create the new "morphs\_textures.bnk".

Grab the fresh created "morphs\_textures.bnk" and move it to "levels". Allow the overwrite.

##### 4.2. Levels.bnk

Start the BnkCreator, add the modified "levels" and create the new "levels.bnk".

##### 4.3. Final touch

Grab the fresh created "levels.bnk", "levels.bnk.dat" and "morphs\_textures.bnk.dat" and move those to their assigned destinations. Allow the overwrites.

morphs\_textures.bnk.dat

After you've done these changes, your hero's skin will stay as young and neutral as from the start of the game. The wings, glowing clothes and all the rest will stay.

So far goes this mod, Hope you enjoy it.

Check out my other guide in which I'll explain how you can get rid of the body morphing like getting tall, fat, or beefed up.

Is there a way so that you only change getting stronger? Or is this just the only way...?

Looks like overwriting the strength1.tex through strentgh5.tex files with the strength0.tex is probably all the texture mods you want to do for that... but then you also want to make sure you've somehow handled the strong morph (.mof) file if you don't want her shape to change, either... I presume you could use 0,0,0 and 1,1,1 values for everything... I imagine that's the starting point.

Good day, all!

I am running with these instructions and modifying the skeletalmorphs to make a couple of mods. I'm almost happy with one to give the female hero HUGE "tracts of land" (Monty Python and the Holy Grail)! We're talking selectable size from basically normal up to K or L cups using the "fat" morph, so you can just eat a few slices of mutton (or drink a few beers) and get bigger, or eat a few carrots, celery stalks, etc. to go down a cup size.

I'll post it when I get it done.

The next one I'm considering is taking "tall" and making her turn into Barbie! (THAT'S going to be

---

a labor of love!!!

This would be a LOT easier if I could make changes on the fly, rather than having to restart the game after each change!

Okay... after a little more playing, I can answer this better. You'll certainly want to overwrite the strength textures in the second repack of levels.bnk, but instead of DELETING unclothed female, delve into the file structure.

`\skeletalmorphs\art\characters\heros\unclothed female\rigdata\ch_herofemale` is completely unused (as far as I can tell) so you could just delete it. (I'm pretty sure that's a vestigial FII folder.

`C:\Users\Matthew\Documents\My Games\Fable 3\skeletalmorphs\art\characters\heros\unclothed female\rigdata\morphs` is where all the action is.

These are plain text files that "morph" your character's "bone" structure.

\*female\_tall makes your heroine about 20% bigger in most dimensions (and tweaks a few joints to make them look nicer at their new sizes).

\*female\_fat makes her about 30% THICKER (but not much taller, if any) while shrinking her breast "bones" (and tweaks a few joints to make them look right at their new sizes).

\*female\_strong makes her about 3% (THREE per cent) bigger in many dimensions but accentuates the "muscles" even further (Biceps, Triceps, Forearms, Neck, Quads, Calves). "Strong" also shrinks her breasts .

To prevent her from looking "beefy" you can just rename female\_strong. I would just append \_orig to make it female\_strong\_orig. This will prevent the program from "seeing" the file, but allow you to put it back later if you change your mind.

Finish the job by repacking the two banks (in the right order, trust me, it doesn't work backwards . As the OP noted, you can have some collision challenges after this kind of change (e.g. I modded out her hips at one point and she kept putting her hands through her hips because the engine still expects them to be where they ought to be... I've also made other changes that caused trouble with my feet not touching the floor or my hair cascading over my "shoulders" 5 inches above them....

I'm playing with this a LOT right now, so if you have a specific look you're going for, I may be able to give you some pointers on where to start tweaking (or at least how some of the variables appear to work).

Mod was coming along swimmingly, then I THOUGHT I hit a snag... ALL the skirts/dresses looked JACKED UP!!! I must have spent a good three or four hours trying to tweak hips, thighs, even the entries for "Chicken\_Tail" and "Pouch\_Front" before I just said "to heck with it" and deleted the morph all together (reset my character to just her tall/strong proportions I've earned...

Turns out THE SKIRTS STILL LOOK JACKED UP!!! SO... I'm going to go back and tweak away at skeletal morphs, secure in the fact that NOTHING I do in there will fix the stupid skirts...

yeah... I spend a lot of time to tuned up this, but nothing work...  
and beware with modifying, you can esaly broke interact animations  
also I'm still looking for the original coefficients  
I believe there are somewhere in globals.gdb  
if someone find it, let me know plz

btw, TheGeniusSavant thanks you for pointing nude mod

Hey, sorry for reviving a old/dead thread but I need help and would be very appreciative if anyone would be willing to lend me a hand, I followed your instructions to the letter but it just made my heroine's textures disappear and she is completely blue.

(I had a back up of the originals so it doesn't matter too much. But I did triple check and make sure I copied and renamed the texture correctly and put in in the correct places, and I repackaged all the files and put them in the correct directories listed above).

But I don't know what I did wrong, I didn't mess with the body morphing because that doesn't bother me but I am trying to change the skin so it is just the neutral/default skin you start with. I hate looking like some porcelain doll from being too good. lol

Jokes aside I would really appreciate some help from anyone who would give me some of their time and help me figure out what I am doing wrong.

Thank you in advance to anyone who gives me their help and time.
